1. The embedded drawings or figures in the specification are improper. The figures or drawings are supposed to be on separate sheets and the specification is supposed to have a "Brief Description of the Drawings". See MPEP 608.02. and 37 CFR 1.81, 1.83-1.85.

2. Claims 2, 13, 14 and 16 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Claim 2 and its dependent claims appear to be brader in scope than claim one by listing more diamine than listed in claim one.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Flodin (6,210,441).

Flodin discloses linear polyurethanes comprising polyisocyanates (col. 2, lines 28-31) polyester diol (bottom col. 1-top col. 2) and chain extended with diamines (col. 2, lines 11-13) and chain terminated with ethanol amine (col. 2, line 60). He discloses that the NCO/OH ratio or the diisocyanate to polyester diol is greater than 2 in many of the examples (examples 1, 5.), and that excess diamine can be used (col. 2, lines 12-13) resulting in amine termination. He shows using the polymer for implants (col. 1, line 14), and in example one he shows making woven mats from fibers, which would be

porous. The properties would be inherent because the polymers are the same as the invention.
